Colorblind Web Page Filter

What are color blind anomalies? ⓘ

Please indicate a resource to be viewed, and a color filter to be applied to that resource.

Type a URL:

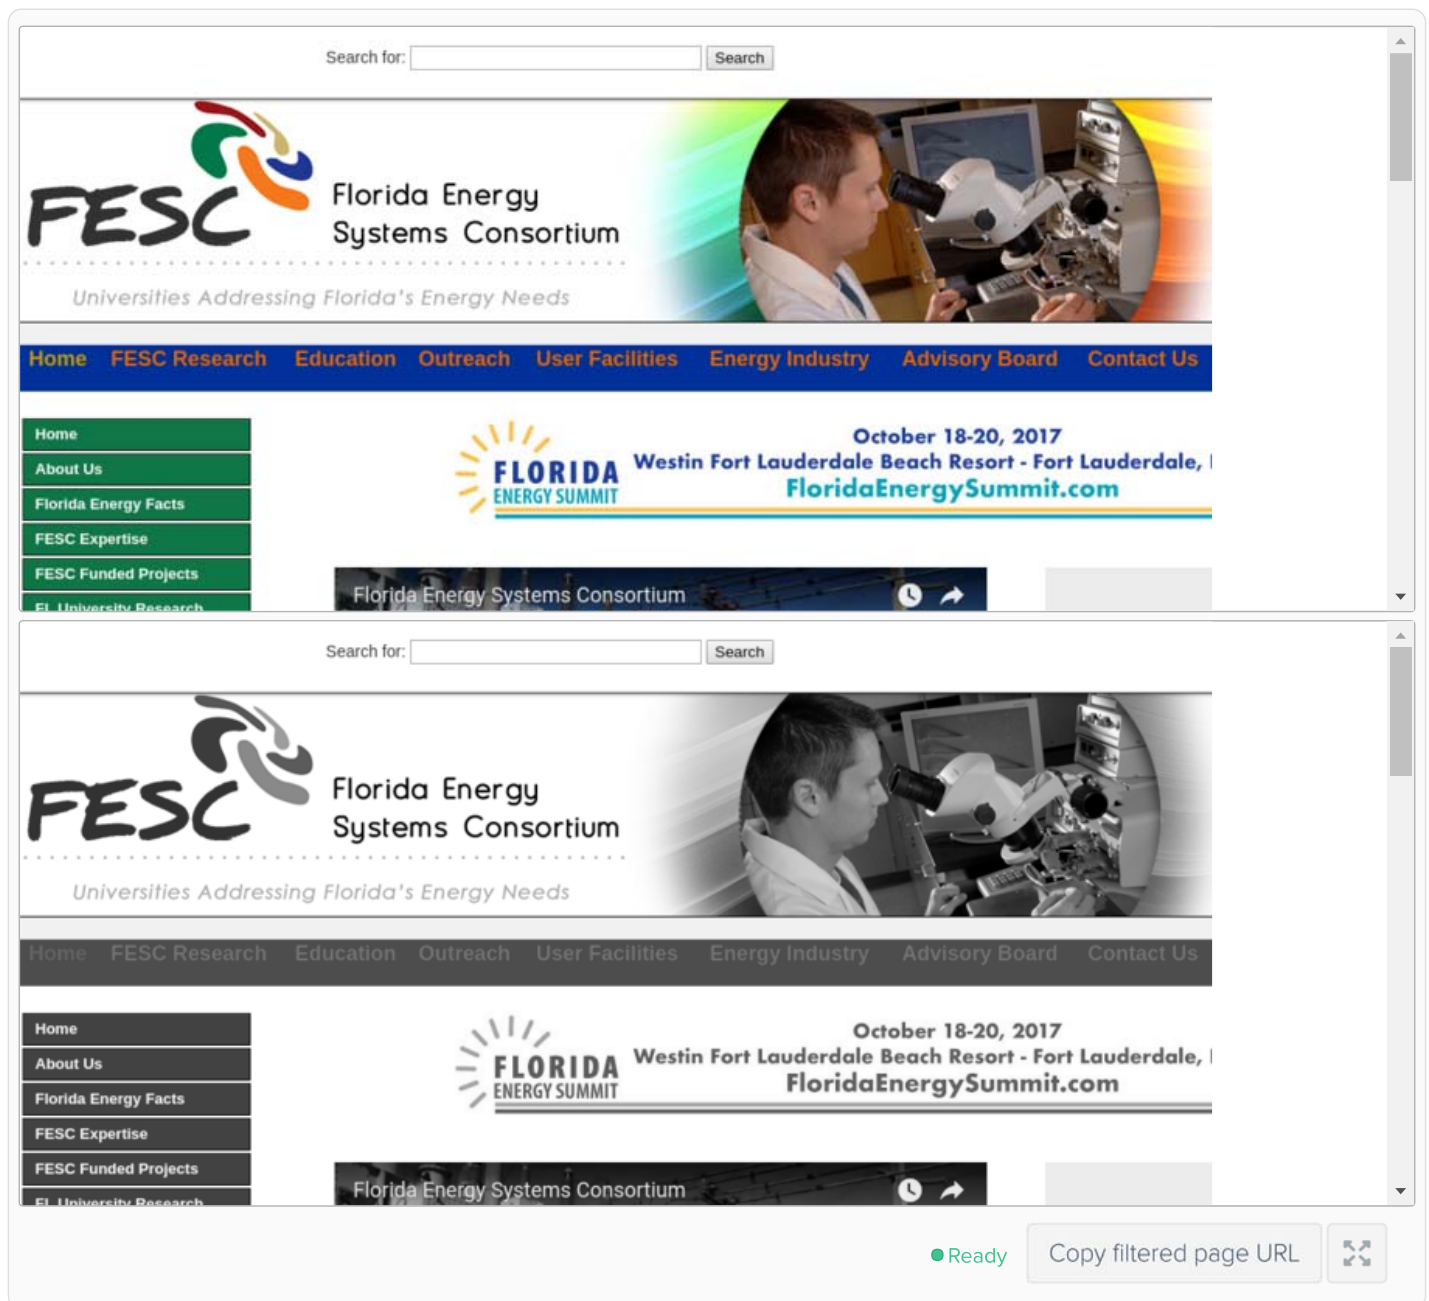

http://floridaenergy.ufl.edu/

And then pick a color filter:

Greyscale/achromatopsia

FETCH AND FILTER!

Use the Colorblind Colorlab to select safe colors earlier in the design process. Learn more about colorblindness in this [Wikipedia entry](#).

This tool is still in development, but [feedback](#) is welcome while we work on it.

If you only use one filter, use the grayscale filter which will not only point out potential problem areas, but will also let you see more clearly which areas the filter is unable to process.

Improvements

We have made the following improvements to the colorblind web page filter. These will be applied automatically to your page.

Improved Image Filtering

Image filtering takes more time than HTML or CSS filtering. If you use images to convey information or to present navigational elements, then previously you filtered images the first time you checked your web page. After that first check, you may have saved time by disabling image
